By submitting, you agree to our [Privacy Policy](#).

2. It would be better to **disable the submit button** and show a **loading state** after the 'Get in Touch' form is submitted. Otherwise, it's unclear if the submission is in progress, and users might accidentally **double-submit**.
3. Same for about us pages '**get in touch**' form.

- ✓ 4. Here, it would be better to make the phone number and email address clickable so that users can initiate a call or start an email directly.

- ✓ 5. The social media links aren't working currently. When they are fixed, they should be set to open in a new tab.

Hasib Howlader

As a Chartered Accountant, Chartered Tax Adviser, and Licensed Insolvency Practitioner, I lead two financial services practices operating across seven countries. My academic journey includes a Master's degree in Chemical Engineering from Imperial College. Fluent in Bengali, Spanish, and English, I also have a passion for playing the piano. An avid marathon runner, I have completed nine marathons and am currently training for the 55km ultra-marathon in South Africa, crossing two oceans in April 2025. Happily married, I am a father to Ariana (12) and Reuben (8). I cherish visiting my hometown, Barsal, in Bangladesh, where I draw much of my inspiration. I'm also a season ticket holder at Tottenham Hotspur - my other love

1. The filter option needs more improvement. It doesn't quite **align with the overall design aesthetic**

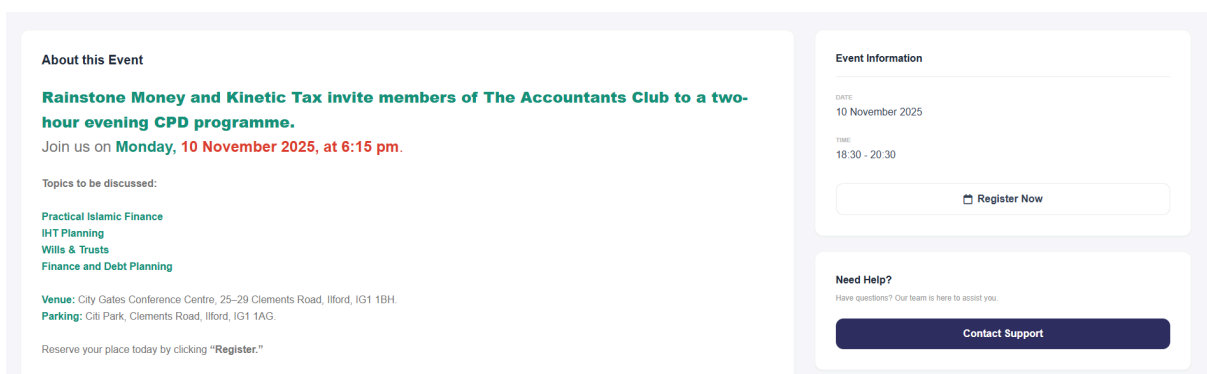

2. Design breaking issue on small device.

- 3 The image section isn't rendering correctly on smaller devices; images are being cut in half. This issue persists across multiple pages. If this isn't the intended design, we need to apply a fix to ensure images scale properly on mobile.

Event

1. The Event Page is experiencing significantly slower load times compared to the rest of the site. We need to investigate what is causing this delay and optimize it to match the performance of our other pages.

- 2 We've identified a dead link on the Event Details page: the 'Contact Support' button is not firing.

Reset Password Form

Reset Password

User Email

User Password

Confirm Password

Reset Password

1. Capitalize placeholders and replace underscores with spaces across all forms.

User Password

Confirm Password

2. There is a UI conflict in the password field: **duplicate 'eye' icons** are appearing during input.

The Accountants Club

Reset Password

User Email

User Password

Confirm Password

3. The password reset form is failing to display **error notifications**. If a submission fails, no message appears at the top to inform the user of what went wrong.

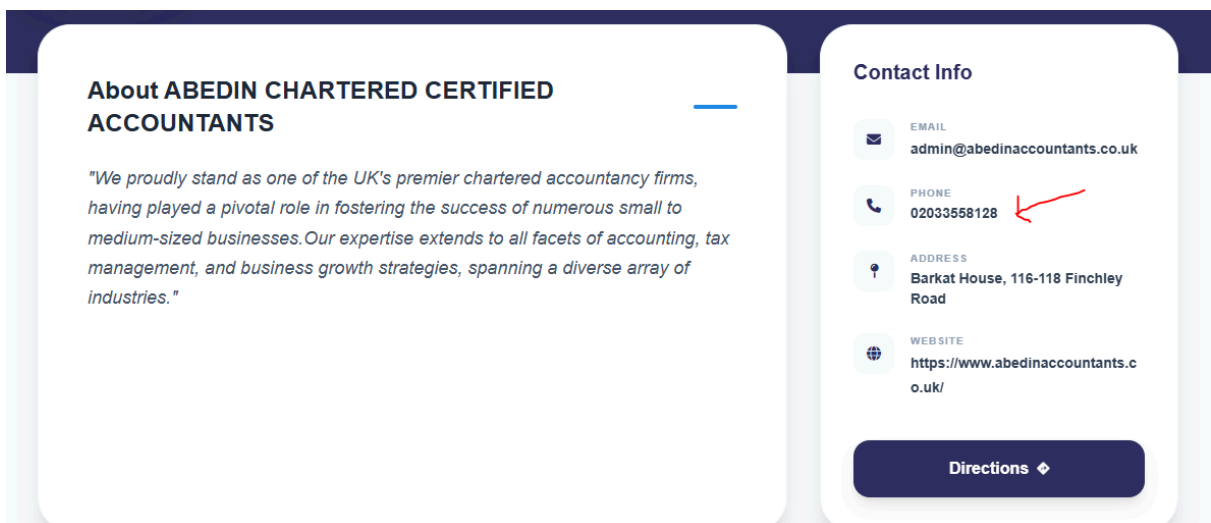

Firm

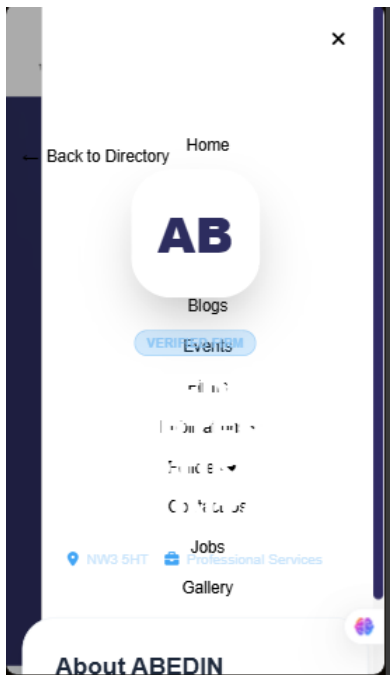

1. The postcode search on the Firm page is getting stuck in an infinite loading state. If there's an issue (like a low balance), it doesn't trigger a toast notification. We need to add an error catch to stop the loader and notify the user.

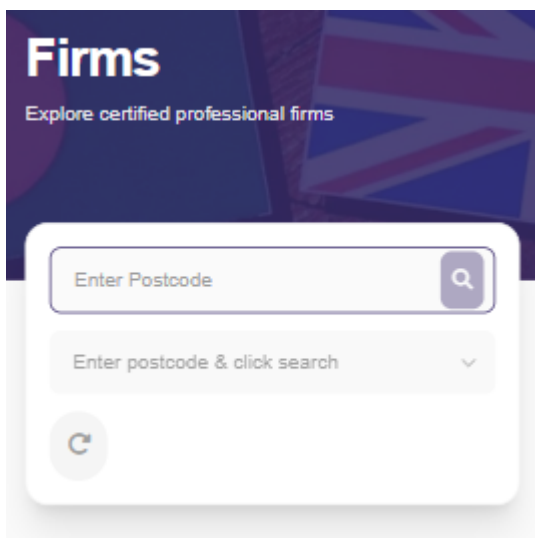

2. Let's update the back button color to white. It's currently black and isn't visible enough against the background.

3. The phone number should be made clickable, similar to the email address. This will allow mobile users to initiate a call directly by tapping the number.

4. The mobile menu on the Firm Details page is rendering incorrectly. It appears to be a **z-index conflict**, as the menu items are being obscured by page content.

5. The filter UI is not scaling well on mobile devices.

Message

Write here...

Send Message

1. The contact form lacks feedback for empty submissions. Currently, the 'Send Message' button doesn't show a loading state or become disabled after being clicked, leaving it unclear whether the form was submitted.
2. Additionally, there are no validation errors or toast notifications appearing to prompt the user to fill in the required fields. The input field should show backend validation.

Blogs

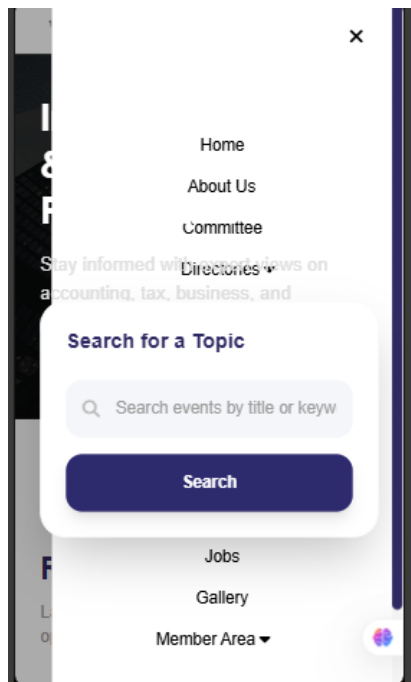

development.

Search for a Topic

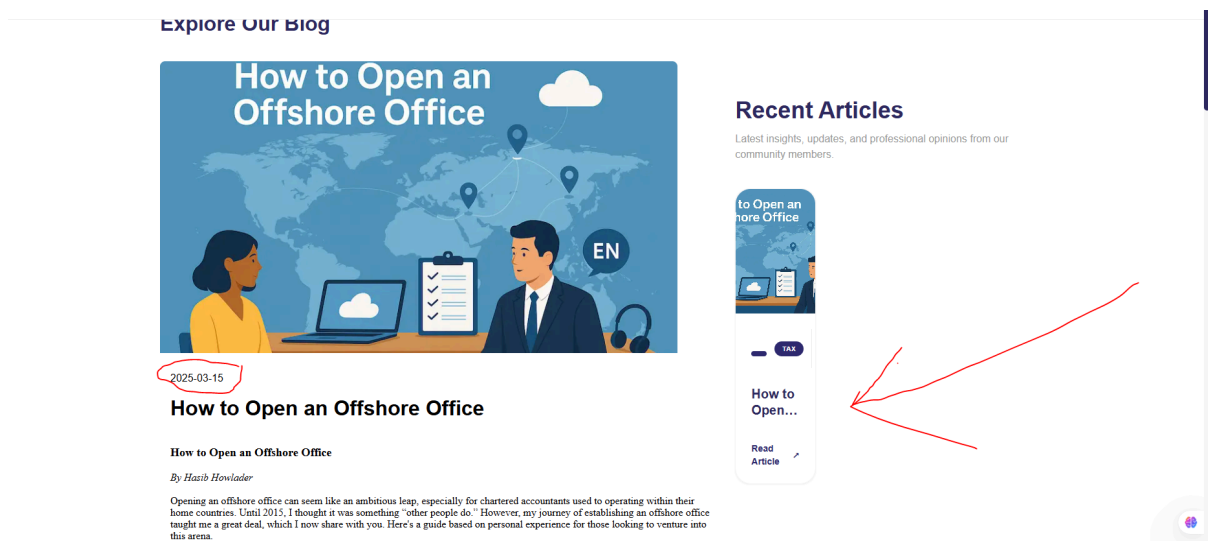

Search events by title or keyword...

Search

1. "Please update the placeholder text on the blog page. It should say '**Search Blogs**' instead of 'Search Event'."
2. "Currently, the filter is not functioning correctly. Fix this. And, if a search yields no results, please display the message: '**No blogs found with this keyword.**'"

3. On the blog page, the mobile menu design is breaking when opened on smaller screens. Please investigate the layout constraints.

4. On the right side, the blog card is not responsive.
5. And on the left side, the date should show the dd-mm-yy format.
6. If possible, make the back button more understandable.

Jobs

Search for Job Posts

Start searching for jobs related to your requirement

Search

Search Results

- ✓ 1. If no jobs are available, please display **'No Jobs Yet.'** If a search filter returns no results, display **'No jobs found with this keyword.'**

F

1. The sidebar layout on the Forum page is breaking on mobile devices.
2. Search labels are invisible on small viewports; they need to be adjusted for mobile display.
3. Search label and Filer both have z-index issue.

Categories: Financial

Upvote Now 

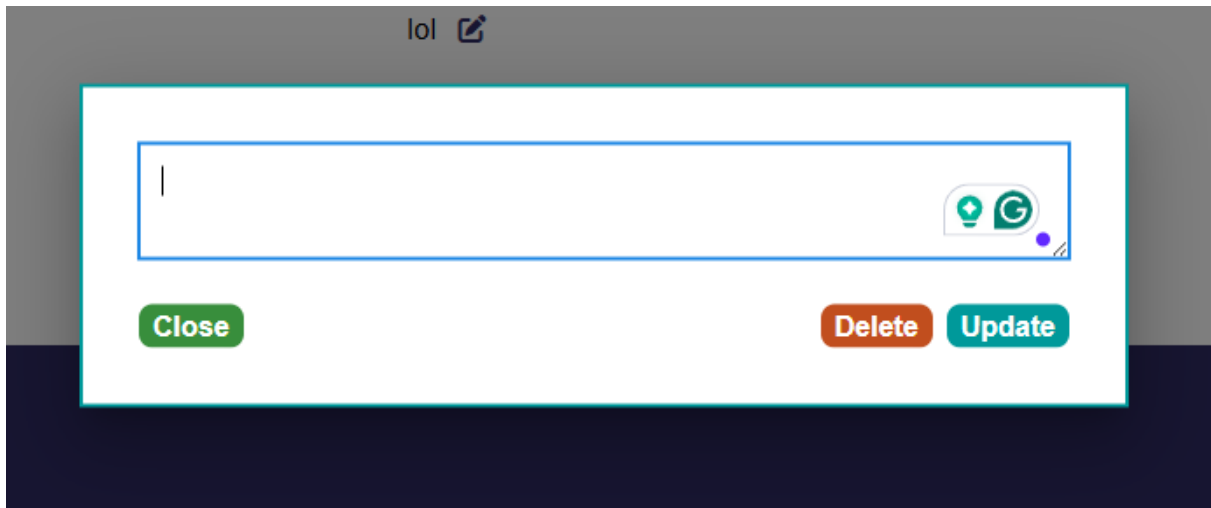

3 Upvotes 4 Replies

test

Post Reply

1. Upvoting and post replies are failing for some users. The main issue is the lack of feedback; when the submit button is clicked, no error messages or toast notifications are displayed to explain why the action failed.
2. The upvote count is not updating **optimistically** or reactively. The change only becomes visible after a manual page refresh.
3. The same **reactivity issue** persists across comments, edits, and replies. The UI does not update automatically after an action; changes only appear following a manual page refresh
4. Action buttons (Upvote, Comment, Reply) are missing **status notifications**. Users are not receiving success or error alerts after submission.
5. There is no back navigation on the reply page. Users are unable to return to the post without using the browser's back button.
6. The Forum Details page needs a back button for improved navigation.

1. Update the button color to match the **primary brand identity**, using the logo colors for consistency across the system
2. There is a logic conflict when updating the message. The data saves correctly, but the UI displays a validation warning as if the input were empty.

[Load More](#)

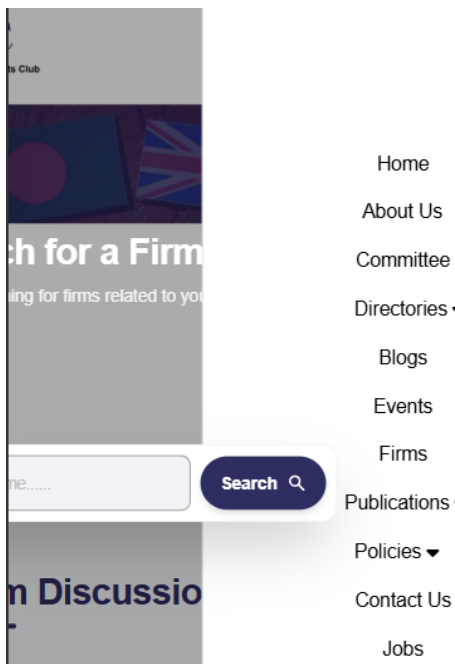

1. Excessive padding/margin is being applied here. We need to remove the extra whitespace.

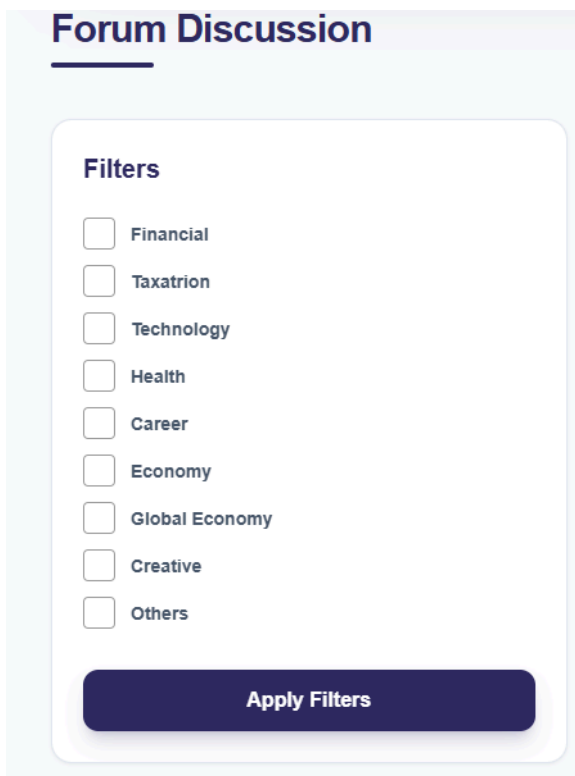

- ✓ 1. The heading '**Search for a Firm**' and the subtext '**Start searching for firms related to your requirement**' are not visible on small devices. Please check for hidden elements or overflow issues in the mobile view.
- ✓ 2. Correct the placeholder text: change '**Firm name**' to '**Forum name**' on the search input.

- ✓ 1. The Forum page lacks **responsive breakpoints**. The UI is breaking on mobile viewports and requires layout optimization.

1. There is a **z-index conflict** between the search filter and the side menu.

1. We should simplify the UI by using a 'Filter By Category' instead of 'Filters'.
2. If a category filter returns no results, please display a '**No data found with this category**' message instead of leaving the page blank

Share Your Thoughts

Choose a category:

- ☐ Financial ☐ Taxation ☐ Technology ☐ Health ☐ Career ☐ Economy ☐ Global Economy
- ☐ Creative ☐ Others

Title

Your message...

Picture

No file chosen

1. This modal lacks a **close (X) icon** and a cancel button. Please add these to ensure the modal can be dismissed.

Member Dashboard

1. After a successful subscription, the **'Back to Dashboard'** action fails to trigger a state refresh. The user's status remains 'unsubscribed' in the UI until a manual page reload forces a data fetch.
2. Add a **'My Dashboard'** link to the profile picture dropdown menu. It is currently only showing 'Logout'.

CPD COURSE

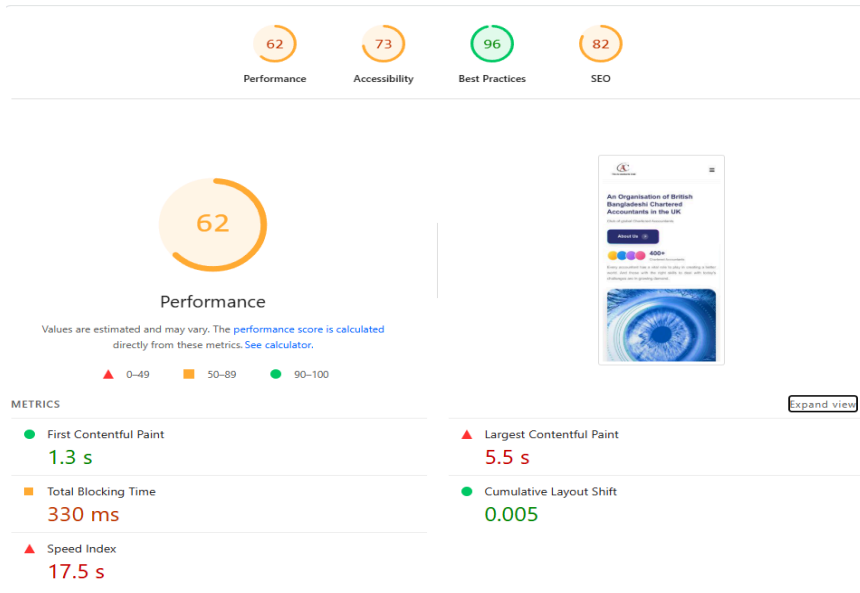

1. Hide all CPD Courses for inactive and expired members. Only live users can access it. (Please take confirmation from the client before implementation)

*****We need to standardize the back-navigation design across the entire system. All 'Back' buttons should use the same styling, positioning, and behavior to ensure UI consistency.*****

Diagnose performance issues

INSIGHTS

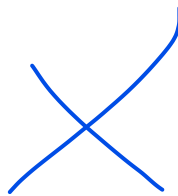

- ▲ Font display — Est savings of 40 ms
- ▲ Forced reflow
- ▲ LCP breakdown
- ▲ LCP request discovery
- Use efficient cache lifetimes — Est savings of 113 KiB
- Improve image delivery — Est savings of 138 KiB
- Legacy JavaScript — Est savings of 12 KiB
- Layout shift culprits
- Optimize DOM size
- 3rd parties

These insights are also available in the Chrome DevTools Performance Panel - [record a trace](#) to view more detailed information.

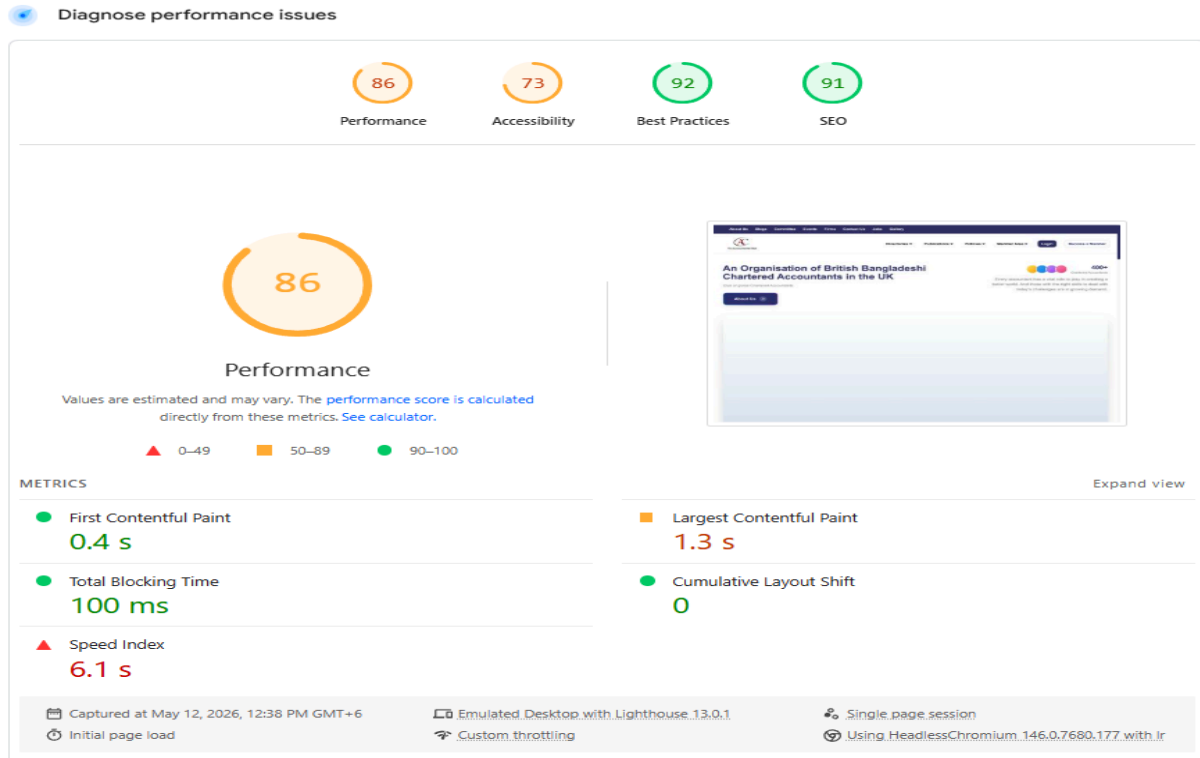

DIAGNOSTICS

- ▲ Minimize main-thread work — 4.6 s
- ▲ Reduce unused JavaScript — Est savings of 66 KiB
- ▲ Reduce unused CSS — Est savings of 31 KiB
- Image elements do not have explicit width and height
- Avoid long main-thread tasks — 5 long tasks found
- User Timing marks and measures — 4 user timings
- Avoid non-composited animations — 10 animated elements found

The mobile site is failing Core Web Vitals, specifically regarding **Largest Contentful Paint (LCP)** and **Total Blocking Time (TBT)**. High **Speed Index** scores indicate that the page is visually loading too slowly on mobile viewports, likely due to main-thread congestion and unoptimized media.
